

The “Red Eye” Cardboard Chair Project

I wanted to design a chair that was not only functional and comfortable to sit in, but also had a “**WOW**” factor.

Even though it looks as if it is made of wood, it’s actually constructed of 120 layers of cardboard. The Red cushions are small removable pillows for the neck and back and are stuffed with shredded cardboard.

I’ve added a very “Special” feature that goes unnoticed unless one sits in the chair!

It **RECLINES!**

The unique design of the Cradle Base allows the Seat to “roll” back into a recline position.

The Multi-Position Leg Rest put the finishing touch to my chair.

The unique design of the Leg Rest enables one to position it in several different ways for added comfort.
